Key risks

Values may fall as well as rise and investors may not get back the full amount invested. Income from investments may fluctuate. Income may be achieved by foregoing future capital growth. The value of property related securities are likely to reflect valuations determined by professional valuers. Such valuations are the opinion of valuers at a particular point in time and are likely to be revised. Property and property related assets can sometimes be illiquid. A fund investing in a specific country carries a greater risk than a fund diversified across a range of countries. If markets fall, gearing can magnify the negative impact on performance.
